The Sustainable Development Goals (SDGs) comprise a global and inclusive agenda to end poverty by 2030. They represent a follow-up to the Millennium Development Goals (MDGs) while including new areas such as climate change, economic inequality, innovation, sustainable consumption, peace and justice, among other priorities. They tackle the root causes of poverty and unite us together to make a positive change for both people and planet. The interesting difference with the MDGs is that, this time, the focus is on the private sector and how it can contribute to achieving this ambitious set of goals. There are 17 Sustainable Development Goals, with a total of 169 targets and 230 indicators. Several private sector players have been deepening their understanding of investment impact and have already sharpened their strategies accordingly. Together, we can make this our investment priority.
The adoption of environmental, social and governance (ESG) considerations in investments has matured continuously in the past decades. This trend falls under the denomination of SRI - ‘sustainable and responsible investment’ - and it has evolved from a risk management focus (typically linked to investment exclusions of specific companies and sectors) to one that seeks opportunities for the creation of long-term value for business and society. Promoting ESG adoption throughout the investment value chain can encourage greater private investment in sustainable development, resulting in greater impact.

The various actors in the investment value chain, including asset owners, asset managers and companies, have been increasingly including ESG and sustainability information in their reporting processes. This has meant a strong boost for the SRI market which, to quote the latest Global Sustainable Investment Alliance (GSIA) report 2016, is now at $22.89 trillion of assets being professionally managed, registering an increase of 25 percent since 2014.

Today, several practitioners apply at least some form of extra-financial evaluation in their portfolio, though this is not sufficient to fall under an SRI denomination or to meet the requirements of one specific strategy. The different categories of SRI strategies can be applied individually or in an aggregated fashion. In Europe, the evolution of SRI strategies has represented a continually rising trend, from 14% (registered for Engagement and Voting) Compound Annual Growth Rate (CAGR) to up to 120% (registered for Impact Investing).

![Table 1 Overview of SRI strategies in Europe (Eurosif SRI Study 2016, p.12)](image-url)
ESG integration refers to the explicit inclusion of ESG factors by asset managers into traditional financial analysis. This investment process has been gaining momentum, not only in Europe but across the globe, becoming the most widely used strategy by SRI investors, whose large majority reportedly has a formal integration policy document. The ESG efforts by the various private actors are consistent with the Sustainable Development Goals (SDGs), but need to be leveraged further to achieve stronger outcomes. Eurosif has recognised different degrees and approaches to ESG integration on the part of investors, as the fundamental methodology for the realisation of SDGs and their ambition. The spectrum of revenue models range from social return only with little or no profit through blended models to the socially motivated businesses with market-based financial returns. The different approaches as illustrated below, show how investments strategies have evolved towards the intention to generate social and environmental impact alongside a financial return, which should be financially sustainable in the long run. At the time of the development of this framework, Bridges Ventures considered Impact Investing to cover both thematic strategies and impact-first strategies. SDG investors can opt to take ESG criteria into consideration to have a positive societal impact, targeting financial returns which can range from below market to market rate returns, committing to both measure and report the social and environmental performance and progress of underlying investments.

Table 2: Bridges Venture Spectrum of Capital (The Bridges Spectrum of Capital, 2015)
The best SRI strategies for SDG investors

Impact Investing

Since the beginning of the articulation of the SDGs, investors have seemed rather keen to focus on impact investing as the SRI strategy which is best able to embody the attainment of the Goals. This strategy was the protagonist of Eurosif’s latest review in 2016, as it proved to be the fastest growing strategy and the one associated with landmark events such as the 21st UN Climate Change Conference of the Parties (COP21), which set the framework for further investment in low-carbon technologies and infrastructure. Impact investing foresees specific characteristics which underpin the strategy, these being:

1) intentionality of ESG impact
2) return expectations
3) impact measurement
4) a long-term horizon

All the mentioned criteria are linked to all SRI strategies, except for the focus on impact measurement, which is therefore considered the key criteria for this investment approach. Eurosif has analysed the impediments to impact investing and has found that there is an interesting correlation between investment barriers and the possibility to gain traction for SDGs. The risks investors see are actually linked to the lack of set metrics which can hamper the comparability. This can have repercussions on the investor’s due diligence process. SDGs have done much in terms of stimulating the development of metrics and international investors have responded by choosing the right strategies and objectives to pursue SDGs.

Table 1: Impact Investing in Europe (Eurosif SRI Study 2016, p.38)
**Best-in-Class**

This strategy allows investors to pick those companies that have the best ESG score in a particular sector. It is therefore possible to take a specific performance indicator which is in line with one of the SDGs. For example, when evaluating its impact performance on decent work (SDG 8), investors can measure and track KPIs such as the number of training hours per employee and the turnover figures.

*Table 2: Best-in-Class growth in Europe (Eurosif SRI Study 2016, p.13)*

**Stewardship and engagement**

SDG Investing has a long-term perspective, which entails the principle of continuous improvement as much for investors as for investees. For this reason, it is imperative for an SDG investor to be an engaged one, as well as one that is prepared to interface with any issuers present in the management portfolio who are not on track with the SDG targets as part of their business strategies.

Sustainability Themed

This strategy includes a variety of themes, which allows investors to choose specific areas of investments, typically with a close link to sustainable development. The emergence of new products and focus on certain themes has sharply increased, as demonstrated by the exponential growth in this strategy over the last five years. European sustainability-themed assets have grown to reach €145 billion at the end of 2015.

Table 4: Sustainability themed Investments growth in Europe (Eurosif SRI Study 2016, p.17)

Sustainability-themed investments that focus on long-term investment themes associated to SDGs, such as water scarcity, energy efficiency, carbon reduction, agricultural yield and access to education, to name a few, can be easily integrated into portfolios. Furthermore, thematic investment proposals can be used to guide other approaches, namely best-in-class, stewardship and engagement, and impact investing. Eurosif's research classified the most popular themes for investors which clearly reflects a tendency to support the fight against climate change and renewable energy.

For investors to be sure they are truly using the right metrics, they can devise methodologies through which they can track the effectiveness of their sustainability choice, by measuring parameters (i.e. carbon intensity) they can track throughout the entire value chain.

Table 5: EU Sustainability themed investments by type (Eurosif SRI Study 2016, p.18)
As achieving the UN’s SDGs will require ‘pouring $1.4tn into low-and lower middle-income countries’, the private sector and investors will have a big role to play in this journey. For the private sector to act, policy-makers must step up and empower investors to help them mobilise private capital through regulations, incentive structures, and public-private partnerships.

The need to capitalise on the private sector’s resources represents an opportunity for investors who are already keen on SRI. As outlined, there are a number of SRI strategies that can be helpful in attaining goals in line with the SDGs. Although impact investing has been elected by some as the preferred strategy, we have seen how relevant other approaches are in pursuing specific sustainable themes and already delivering on these targets. The systemic integration of ESG criteria represents a solid starting point for investors who intend to structure an SDG investment policy. Not only those companies that are proving to be the best performers across classes and industries should be their sole focus. The SDG investor has a responsibility to ensure that a positive change is made, and is therefore instrumental in making that change. In this respect, engaging with issuers is essential to guaranteeing that sustainability is embraced by many and in a consistent fashion.

The motivators to invest sustainably have radically increased in the past years. What the future holds is an even stronger push and business case for investors to take the lead and reshape the economies and development agenda.

<tr>
<td>Impact investments are investments made into companies, organisations and funds with the intention to generate social and environmental impact alongside a financial return. Impact investments can be made in both emerging and developed markets, and target a range of returns from below market-to-market rate, depending upon the circumstances. Investments are often project-specific, and distinct from philanthropy, as the investor retains ownership of the asset and expects a positive financial return. Examples of impact investment include: microfinance, community investing, social business/entrepreneurship funds and French fonds solidaires.</td>
<td>Where leading or best-performing investments within a universe, category, or class are selected or weighted based on ESG criteria. This approach involves the selection or weighting of the best performing or most improved companies or assets as identified by ESG analysis, within a defined investment universe. This approach includes Best-in-Class, best-in-universe, and best-effort.</td>
<td>Engagement activities and active ownership through voting of shares and engagement with companies on ESG matters. This is a long-term process, seeking to influence behaviour or increase disclosure.</td>
<td>The explicit inclusion by asset managers of ESG risks and opportunities into traditional financial analysis and investment decisions based on a systematic process and appropriate research sources. This type covers explicit consideration of ESG factors alongside financial factors in the mainstream analysis of investments. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.</td>
<td>Investment in themes or assets linked to the development of sustainability. Thematic funds focus on specific or multiple issues related to ESG criteria. Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health. Since 2008, funds are required to have an ESG analysis or screen of investments in order to be counted in this approach.</td>

Eurosif’s Mission

Eurosif is the leading pan-European sustainable and responsible investment (SRI) membership organisation whose mission is to promote sustainability through European financial markets. Eurosif works as a partnership of Europe-based national Sustainable Investment Fora (SIFs) with the direct support of their network which spans over 400 Europe-based organisations drawn from the sustainable investment industry value chain. These organisations include institutional investors, asset managers, financial services, index providers and ESG research and analysis firms totalling over €8 trillion in total assets. Eurosif is also a founding member of the Global Sustainable Investment Alliance, the alliance of the largest SIFs around the world. The main activities of Eurosif are public policy, research and creating platforms for nurturing sustainable investing best practices.

Our Members

Eurosif’s members, the Sustainable Investment Forums, or SIFs, are membership-based sustainable and responsible investment organisations. They work to promote the adoption of SRI practices and more generally for a broader adoption of sustainability matters into financial markets and the investment chain at member state level.
